ABSTRACT

When the authors conducted research on information systems rental rental DVD / VCD Disc Ultra web-based, the authors found that frenchise does not provide rental service DVD / VCD over the Internet or commonly referred to as the Website, Rental rental DVD / VCD can only serve transactions rentals through the website or come directly to the Outlet Ultra Disc and can also be done via telephone, as well as in the method of promotion or recognition rental DVD / VCD is only done in the area of West Java alone, and yet to reach areas or other large cities in Indonesia.

The method used in the design of Information Systems Rental Rental DVD / VCD Web-Based Ultra Disc In Bandung, and to know the running system, using a structured approach, using several tools like Flowmap, Context Diagram, DFD, Data Dictionary, Normalization, and ERD, while for the system development method using a methodology Prototype Model. Support software is used, Xampp package, Macromedia Dreamweaver MX, and MySQL database as a builder as well as program documentation and reports.

With the web-based information system, which is already connected to the database, would be very easy to manage and minimize the movies - movies that are on lease by the customer. These data are rented movies will be very helpful at all in terms of checking the film - films that are out or on lease by the customer, because every piece of information to be provided to customers or end can be more rapid, accurate, and certainly with a very low cost.
