Apple to Pay $532.9m After Patent Trial

Susan Decker & Dennis Robertson

Apple was told to pay $532.9 million after a federal jury said the company's iTunes software used a Texas company's patented inventions without permission.

Closely held Smartflash, which claimed that Apple infringed three patents, was seeking $852 million in damages, while Apple said it was worth $4.5 million at most.

A federal jury in Tyler, Texas, where Smartflash is based, on Tuesday rejected Apple's arguments that it did not use the inventions and that the patents were invalid.

The dispute is over digital rights management and inventions related to data storage and managing access through payment systems. Smartflash claimed that iTunes used the inventions in applications such as Game Circus's Coin Dozer and 4 Pics 1 Movie. Apple pledged to appeal.

"Smartflash makes no products, has no employees, creates no jobs, has no US presence, and is exploiting our patent system to seek royalties for technology Apple invented," said Kristin Huguet, an Apple spokeswoman.

"We refused to pay off this company for the ideas our employees spent years innovating and unfortunately we have been left with no choice but to take this fight up through the court system."

Game Circus and another game developer, KingsIsle Entertainment, maker of Wizard 101 and Grub Guardian, had also been defendants before they were dismissed from the case last year.

In asking for $852 million, Smartflash argued it was entitled to a percentage of sales of Apple's devices, including the iPhone, iPad and Mac computers, that were used to access iTunes. It claimed that Apple had intentionally infringed the patents, in part because one of its executives had been given a briefing on the technology more than a decade ago.

"Apple doesn't respect Smartflash's inventions," the company's lawyer, John Ward of Ward & Smith in Longview, Texas, told the jury.

"Not a single witness could be bothered with reviewing the patent."

Cupertino, California-based Apple attacked every aspect of Smartflash's case. It said the patents were invalid and were not infringed. It said Smartflash did not have complete control of the patents and waited too long to file suit. It also argued that Smartflash's royalty demands were "excessive and unsupportable."

"They are not just invalid, they are invalid many times over," James Batchelder a lawyer at Ropes & Gray in East Palo Alto, California, who is representing Apple, told the jury.

Smartflash was started in the early 2000s by inventor Patrick Racz in an effort to commercialize his ideas. At one point, Racz was offered less than $200,000 for an interest in one of his patents, according to a court filing.

Racz met with executives of what is now Gemalto, including Augustin Farrugia, now a senior director at Apple, according to the complaint. Farrugia, a long-time specialist in digital rights, is Apple's director of security and designed the national banking system for Singapore in the 1990s.

Smartflash does not make any products and its only business is licensing seven patents issued between 2008 and 2012, which Racz co-invented. Its address is a suite in an office building across the street from the courthouse where the trial was held.

"The jury was very attentive, took good notes and worked very hard," Ward said after the verdict was announced. "We think they got it right."

Apple had sales of $18 billion for iTunes, software and services last fiscal year, about 10 percent of the company's revenue.

Another Apple lawyer, Eric Albritton of the Albritton Law Firm in Longview, told the jury there was no reason for Apple to pay royalties on the price of a phone when the dispute is over a single feature.

"It doesn't make a lick of sense that one person would buy an iPhone and not make calls," he told the jury. "People do not buy cell phones for the sole purpose of using apps."

Smartflash also has sued Apple's chief smartphone rival, Samsung Electronics. A trial in that case is to be scheduled now that the Apple trial is over. Google, which also was sued by Smartflash, is trying to have its case transferred to a court in California. Amazon.com was sued in December, also in Texas.

"Smartflash makes no products, has no employees, creates no jobs and has no US presence

European Clubs Want Compensation for Qatar World Cup

Mike Collett & Karolos Grohmann

European clubs want compensation if FIFA stages the 2022 World Cup in Qatar in November and December while the leagues said such a move would cause "great damage" to domestic soccer.

Meanwhile, the world players' union FIFPro said any discussion over shortening the World Cup should involve its members and that it remained equally concerned about the human rights situation in the Gulf state.

A FIFA task force examining dates for the event recommended a shorter tournament, staged over the cooler months of November and December 2022, after the last of its three meetings in Doha on Tuesday.

The recommendation will be sent to FIFA's executive committee for a final decision in Zurich on March 20, ending a four-year long saga over when the tournament should be played.

"For the football family, the rescheduling of the FIFA World Cup 2022 presents a difficult and challenging task," Karl-Heinz Rummenigge, chairman of the European Clubs' Association (ECA), said in a statement.

"All match calendars across the world will have to accommodate such a tournament in 2022 to 2023, which requires everyone's willingness to compromise."

"European clubs and leagues cannot be expected to bear the costs for such rescheduling. We expect the clubs to be compensated for the damage that a final decision would cause."

The Association of European Professional Football Leagues (EPFL) also disagreed with November-December, saying the proposal would "perturb and cause great damage to the normal running of the European domestic competitions."

The EPFL reiterated that May would be a less disruptive way of avoided the searing heat of June and July, a period, which has been dismissed despite Qatari assurances that they can build naturally cooled stadiums.

English Premier League chief executive Richard Scudamore said there was little discussion during Tuesday's meeting.

> **European clubs and leagues cannot be expected to bear the costs for such rescheduling**
>
> Karl-Heinz Rummenigge, ECA chairman

"We were pretty much just told, hence the disappointment," he said.

The German Football League (DLF) said it was concerned about the players.

"Staging the World Cup in November and December is an organizational as well as a financial burden for European leagues," DLF managing director Andreas Rettig said.

"One also has to take into account the strain on top players."

"A shortened match plan cannot mean that there will be the same number of games to be played in a shorter period of time."

FIFPro was satisfied that the summer months of June and July had been ruled out but said there was a lot more to worry about.

"Changes to the match schedule that could potentially place extra strain on the workload of the players is for FIFPro to analyze together with all stakeholders in due course," the organization said in a statement.
