Sukabumi Taekwondo is a martial arts training venue in the activities that have the member registration and scheduling of training and test ride the belt, with the rapid technological developments in taekwondo sukabumi all activities in the processing of data members will be more effective in the presence of taekwondo website online.

For systems development methods and software used is a prototype methodology. In this methodology conducted several stages to build a software, namely: identifying user needs, create a prototype / model systems will be designed, tested the prototype / pilot system has been designed, improved prototype / determine whether the system is acceptable to the user, or have done some improvements, developing a production version.

Based on the results of tests conducted on the software that is built taekwondo website online can be expected to assist the member registration and scheduling of taekwondo.
