B-Sound Music Studio is a company engaged in the music studio rental services and also in the field of pnejualan, the company had not been computerized so it is very difficult to promote the studio, losing competitiveness with other music studios, and also the problem of time in exchange of information so the customer to rent a studio or buy the goods must come directly to where this company.

To support the creation of this system in this study the authors used the method of observation and interviews as well as the use of prototype software development methodology that includes the identification of user requirements, making prototype, testing prototype, repairing prototype and development of the production version is expected to assist in the design of this system. E-commerce application program is using PHP, Macromedia Dreamweaver 8 and Apache Web server with the Triad as My SQL as Database.

Made this system can streamline the performance of the company in response to customers who memboking studio, as it also can facilitate the customers in the process of booking and music studio rental. However, this application still has shortcomings, needs improvement, the addition and development in order to be a perfect application.
