PT PLN (Persero) Jabar & Banten Distribution APJ Bandung is a company that manage electricity supply and distribution. The company has several divisions in its organization, one of them is Warehouse Division which handles inventory records, purchasing, procurement of operational requirements from all divisions, and reporting the number of demand on monthly basis. The problem arises because inventory data processing is still performed manually using Microsoft Excel. This makes inventory control becomes unorganized, thus double item name frequently happened. In creating report, the warehouse officer needs a lot of time with inaccurate result. A web based inventory control information system is developed in order to solve the problem.

The application of inventory control information system is developed to improve the process that takes place in warehouse division, such as: stock processing, item out processing, order processing, and user processing so that it can be accessed from any computer that is connected to intranet web.

Based on the implementation and testing which is done by the user, the inventory control information system can help user in processing the data so that the user can produce information faster and data processing for every related divisions can be done easier within the inventory control information system.
