ABSTRACT

Holindo's Employees Cooperation is a corporation which runs its business in saving and credits services. On the systems running cooperation officers conducted recording data of member, deposit, loans, installment and its deduction on the ledger. In making the report the officer had difficulties to move the data transaction each month so it took more time. From the results of study conducted, the researcher intended to solve the problems which were faced by the Holindo's Employees Cooperation.

The approach metode which was used in this study was a structured approach that uses several tools and working techniques, such as Flowmap, Diagram Context and Data Flow Diagrams (DFD). The development model used was the Prototype model. The prototype is a method in the development of systems that use the approach to create a program to quickly and gradually thus it could be evaluated by the user.

The information system of Savings and credits was built as one of the solutions to problems faced by Holindo's Employees Cooperation in processing data and making the report. The results of this study are expected can be advantageous to the Holindo's Employees Cooperation and related agencies there in.

Keyswords: Information System, Cooperation, Saving and Credits
