## ABSTRACT

Art Painting in Indonesia has the potential to be developed as income of a company or store. The number of potential areas of art in Indonesia especially in the city very much but not all areas are managed with good potential, so with a lack of management of all the painters and the lack of publicity to the wider community, the latest painting is not much information known to the community. This can be an obstacle in which information is very important art to be known by the society, thus indirectly if the public knows as well as buying, can provide more value than the income sector of the location of the seller disekitaran painting.

Based on the above problem, if all the paintings are managed with a system that can inform and be able to trade directly to the public, the information obtained is not only limited information but indirectly influenced art to the community, especially in the art of painting. Information Systems sales in Flower Art Gallery is a computer-based Information System that is designed to work by using data that has to be processed in the form of information is needed such as managing goods data, transaction data and reporting data.

Thus it is proper as a society that many have the potential of art, especially in the art of painting to manage data and sales information, so that by facilitating and enable potential buyers to find information and buy paintings painting. did not rule out making a source of income.
