ABSTRACT

In a department, always desire to go forward and can be able to be a target for a long period of time that planned since the department was born. One of them is Hotel Prima (PKPRI KABUPATEN Cianjur), where the excellent weakness happened in room's service now is use the Excel application yet that just can handle the status of room is filled or empty with looking for the keys of room there was meaning the room is empty and the process of printing check that good but there was still typing and use the manual calculate for equals of the transaction because the limited Excel application.

Design for the propose system is using prototype method, with description method to exert for gather in classification and analyzing file direct to get the plain module and giving the plain description. By this method, programmer and user can be interactive to each other for a long process system manufacture.

By this information system room's service at Hotel Prima (PKPRI KABUPATEN Cianjur) to expect can help the management in handle the system about Check-in, Check-out, or other order. The other one, the file of department can be save more in order and also the process of livelihood a living information can be faster.

Key word: prototyping, service, check-in and check-out.
