ABSTRACT

Development in eletronics really influence on science and technology in daily life which is inferiority. Nowdays ,existence of technology in a company or instance really important, so human should be appropiate with era globalization . For instance ,in data processing,and if using information technology will be further,accurate and good working.Because these computerization system will be helping in data processing,data maintenance which libarary has ,then could be efisience the time and increase result information accurated data processing of libarary.

For these system which is has been working now ,the library 400 cirebon city that have not been using computerization system , however the balancing with library capacity develpoment found some problems that spent time,for instance looking for the data too much,so never on time in made the reports and etc. Based on above the problems thenl be create aplication programme "LIBRARY INFORMATION SYSTEM ON 400's LIBRARY BAKTI TENTARA PELAJAR CIREBON"

Based on these system in using Research methodology ,it is descritive methodology that describe the problems which is happening in the field as how as been there. Then to analyze and describing data that collected appropiate with intends of research ,for building the system with using protype methodology and programme language which using microsoft visual basic 6.0 while The technic of collected data that using answer question,observation and Information system will be efisience on works and also to eficience the time in member data processing and book data ,so increasing library serving and to optimal works.

Keyword :

Information Systems, Library, Microsoft Visual Basic 6.0
