ABSTRACT

Stores Graha Music House is one of the private company sales and purchases. Along the ease in obtaining goods and greater profits to develop Graha Music Store House, the store provides sales on credit with a view to empower consumers and enhance the company's sales. For each sales transaction and the purchase, sale and purchase report, stock report Graha Music Store House often have errors and delays in the reporting of sales and purchases, inventory.

As for system planning that is us us the method prototyping with the method of the system approach of taking the form of the analysis approach and the programming terstruktur as process aids like flow the folder (the document flowchart), the diagram of the context (contex the diagram), dfd (the data flow the diagram) and the planning implement, database that in propos take the form of erd (entity relationship the diagram) the table relations, unormal, normalisasi1, the normalisations, normalisasi3. Whereas the development implement of the application database us the language pemograman visual basic 6,0 and microsoft sql server 2000 as the database, with the existence of the production of the system of sale information and this purchase could help the achievement of my shoes shop mody especially the sale transaction and the purchase, the report on stock of the thing, the sale and the purchase with the system that is computerized.

From results of the development of this system then could reduce the mistake in the process of the registration of the sale data and the purchase, and reduc the delay in report delivery moreover also more could make the place of the storage of the data effective because already dimasukan the form hardisk, never again in the form of the document dump.

Key word : Sale, Purchasing, credit Purchasing, Prototype
