ABSTRACK

Residents Teachers and Employees Cooperative Education Office Andir District is one savings and loan groups of teachers - teachers in various elementary schools in districts Andir complex. In the development of technologies that are currently being advanced by leaps and bounds, it is needed by every company in the process of data processing using computer technology. But at the Teachers and Employees Cooperatives Citizens District Education Office Andir is still having some problems such as data processing cooperatives borrowed is still done manually, in other words all the activities carried out have not used the computerized system, so many obstacles when doing data processing. So from this author aims to create a new order processing system to be good and simplify the transaction process so that savings and loans penuis can develop a system running the software run by building on Cooperative Citizens Teachers and Employees Andir District Education Office.

In this thesis report, the authors conducted research in Information Systems savings and loan where the system is a system that handles savings and loan processes and procedures by developing a method using a prototype using Visual Basic 6.0 application with the MySQL database server 2000.

*With the building of a system which is renewable at the Cooperative Citizens Teachers and Employees Andir District Education Office is to be able to facilitate the processing of data in order not to spend a long time and the results of the report will be sorted out in detai*l.
