ABSTRACT

PT. Wahana Adiwidia is company that moved in property agent in Bandung area. One of this company purposes is to market houses. This company will serve any kind of information about all prices of new or old houses which will be sold in Bandung area.

One of the writer concern to have a research of PT.Wahana Adiwidia is that this company doesn't have marketing for selling or promoting houses or other kind of properties that use technology basicly on web, so i thought i could able to maximize the information technology potential, with developing the system information of marketing property.

With this system information, company of PT.Wahana Adiwidia could able the best solution to solve the problem of finding the listing data, to served information for the consumer completely n detailed, give an easier to cunsomer or company in seeking of data listing property.
