*The aims of this study are to find out " **Effectivity Of Intranet Use At PT. Dirgantara Indonesia Bandung To Comply With Informations Necessities For Its Employee"**. To answer those problems, researcher tried to analyze how the objectives, the intensity, the content of messages and the barriers that find in using "Portal intranet "in PT. Dirgantara Indonesia, Bandung*

***Research approach** was quantitative and the methods were descriptive methods. Data were collected by observation, questionnaires, interviews, documentation, literature studies and intranet searches. Ninety eight PTDI's employees who used "Portal" intranet were selected as informants to fill in questionnaires. From the results of questionnaires, the data were described based on related definitions.*

***The results showed that:** The PT. Dirgantara Indonesia Bandung provides an internal media in form of an Intranet called "Portal" as communication media among divisions, employees, and employers. Through a "portal" intranet, employees who are connected together via an intranet server are expected to be able to collaborate with colleagues for working out jobs efficiently and intensely. In term of intranet availability, employees hopefully can receive clear, accurate and complete information about the condition of the company and company news either from outside or within company, so that no more miss information between leaders and staffs. The intranet availability is also expected to increase positive attitudes of employees to the company that will determine the company's productivities.*

***Research Conclusions:** Improving the system work Intranet "Portal" with the intensity of the time more quickly and easily accessed by users ie employees with added features in it to make it more complete. To be able to develop an intranet application "portal" is in accordance with the development needs of employee.*

***Suggestions:** Administrators can better socialize the internal media, intranet "portal" is the employee, the employee of PT. DI Bandung can use this medium as an interactive communication tool, improving working systems Intranet "Portal" with the intensity of a faster time and easily accessible by users ie employees and developing intranet applications "portal" is in accordance with the development needs of employees, using moregroupware because intranet is already using open source applications*
