PT TNS Bandung had difficulty in the promotion of the company, the division of tasks in the project is still a paper record, the processing of survey data obtained by the interviewer recapitulated, and processing of survey data is still taken from the recap. Of the various problems identified Bandung PT TNS intends to build a system that can cope with the problem. Information system which would be built is a web management project implementation TNS survey PT Bandung, PT TNS web enables the implementation of the survey process began ordering the survey project, project payment surveys, job survey projects, and filling in questionnaire surveys can be done. With the implementation of the project management web survey is a client does not need to come to the office of TNS to order the project, the client can directly order the survey project will be done and make payments directly at any time and anywhere, the division of survey project from start to Head project, Supervisor and Interviewer can be done better, because it has provided facilities survey division of project tasks within the system, filling questionnaires that were previously done in the paper can be replaced by charging directly into the web management of the implementation of this survey using the online application questionnaire, thereby charging and delivery of the questionnaire results obtained from field can be directly sent and processed properly and quickly.
