ABSTRACT

Koperasi is economy society institution that has function commonly to move the economy society it self and to increase or to make the prosperous, especially for the members. It also participates to make progressive, equitable and wealthy society according to Pancasila and Undang-Undang Dasar 1945. The purpose of this final report is to know how the process of loan and safe in effort loan-safe unit Koperasi Pedagang Pasar Baru (KPPB) Bandung. But One of service is given by the form of saving and loan finance. System applies in the reality still not yet used the correct information system, so that oftentimes generate the problem of data processing and or report making. The purpose of compilation skripsi is making the information system of saving and loan of finance there with supporter software so that data is got quickly, precise, and accurate.

Method of system development that used is method prototype because if in phase which is walk there are insuffiency at previous phase, can be conducted by a direct addition without having to finish until last phase ahead. Appliance of system scheme such as flowmap, context diagram, data flow diagram, while for the scheme of database the assistive appliance used normalization, entity relational diagram, and relationship tables. Software used to develop the application is Visual Basic 6.0, database Microsoft sql Server and report with Cristal Report.

Design application KSP built able to assist saving and loan unit performance in seeking and saving and loan data processing, so that information yielded earns quicker, precise, and accurate. Besides storage space of documents required not too wide because some of data kept in harddisk.
