ABSTRACT

ADE COLLECTION is one of business concern selling and buying shoes. At the moment, information system ADE COLLCETION in this time not yet computerized better still done manually in the case of sales transactiondata processing, purchasing,stock and in course of making financial report, so that the report cannot be completed as it is expected because the running system is conducted annually. Employees should be careful in making financial report, which make their workings inefficient.

The design of accounting information system in ADE COLLECTION uses prototype method. System scheme appliance model used flowmap, context diagram, data flow diagram (DFD) and data dictionary, while appliance used for the scheme of data bases is normalization, table relationship, and entity relationship diagram (ERD). Supporter software used is visual basc 6.0 crystal reports 8.5 and Microsoft sql server 2000.

With this new system, the data saving of sale and purchase transaction, debt payment, payment credit and other items will be centrally integrated by database system, so that can helpful in the making of sale and purchasereport, debt list, report supply of fertilizer and chiefly financial report, with this new system can help employees to work in their jobs.
