ABSTRACT

Klinik Bersalin Theresia is one of agencies in health. For data processing and reporting patient services, Teresa Maternity Clinic are experiencing delays, as well as stacking faults form in Klinik Bersalin Theresia. From the results of the research has been conducted, researchers intend to help solve the problems faced by designing a system of patient care information.

From the results of the research has been conducted, researchers intend to help solve the problems faced by designing an information system of inpatient and outpatient. In this case the researchers used a prototype for the development of methods and systems using a structured approach that uses several tools and working techniques, such as flowmap, context diagrams, and Data Flow Diagrams (DFD).

In order from the design of this system, data processing services to patients more quickly and reduce errors in data recording process, and reduce delays in the manufacture and delivery of reports.
