Kopontren Daarut Tauhid is a cooperative in various sectors of business. Public health services is one of them. Its implementation is to market herbal products such as honey and Seed. These products are sold directly by Kopontren Daarut Tauhiid to the public especially in the area of Bandung and its surroundings. In the process of selling products Kopontren Daarut Tauhid has obstacles, ranging from difficulties in the process of selling products to consumers of honey and the Black Seed from outside the area of Bandung, the lack of media booking transaction in Kopontren Daarut Tauhid and the difficulty in data processing and report generation products.

In the research will be made an application online ordering and sales, a tool used to describe the system model is a form of data flow diagrams (FlowMap), context diagrams, and Data Flow Diagrams (DFD), as well as in database design using a data dictionary, and Entity Relationship diagram (ERD), while the programming language used to create this program is a Php and MySql with Adobe Dreamweaver assisted tools and Xampp.

Based on the results of testing facilities available to visitors, consumers, and the administration, payment of existing facilities, and system testing to generate information concluded that the overall system runs as expected.

Keywords: Ordering and sales systems, information technology sales, online payment transactions
