Along with the development of information technology, the need for accurate information is also increasingly needed. One of them is information about the prayer schedule, qibla direction and other Islamic information.

Utilization of mobile devices as a companion in performing daily activities has become a familiar. This is because mobile phones are no longer just a communication device. So to fill the need for Islamic information by using mobile technology required an application androiIslam.

This application was built to follow the development of mobile technology which growing at this time, that is built on the android mobile platform. With this application can facilitate the Muslims getting Islamic information.
