Pagaralam *city plant cooperation is the cooperation that is provide products of plants seed. Those cooperation also have so many customer in and outside the city. Pagaralam still assume manual procedure shopping or customer have to directly come to cooperation. And also about the note of the transaction of product selling, to solve this problem, and to promote increasing to width cooperation have to use technology in distributing the E-commerce.*

To methodology of research software use waterfall method, meanwhile to show the data use structure method, ERD to describe data type and DFD to describe functional type.

The application of E-commerce can help customer to get information about product that is offered by cooperation and to make customer easy in ordering a product , and can help increase product selling to plant city cooperation in Pagaralam.
