ABSTRACT

An agency or company requires a tool to karyawanya attendance as a sign of presence. From the results reported absences process undertaken will be used for various purposes promotion or other purposes. There are many tools that are absent in the market like a time machine, scan bar codes and finger print. By designing the attendance system using RFID and with the features of RFID expected can be perform the good absenteeism process. By using the RFID tags as the sign of identity as well as absentee tool and RFID Reader as the reader of the RFID tags are used. And by designing the application program using Visual Basic 6.0 so that the hardware (RFID) be able to communicate with the software. So that when the process of scanning the RFID user identity can be displayed. record the time when the RFID code and the password is entered is suitable and the results of programs designed can be print the report absentee per week, per month and per year
