Today, The computers and devices are not longer strange. Like cellphone, laptop, notebook, and the others mobile devices. Then the developer is competing to develop the existing technology to be allow the people use these technology to make easier their working, or use to as their want.

The need for the latest information for news search, so a lot of sites that provide RSS feeds in order to be accessible to those who need it for specific purposes.

Therefore, a lot of application developers, especially the developer of Android apps that make the application to gather news from various sources such as the Content Aggregator, RSS Reader, News Reader, etc.

Content Aggregator application is an application that make use of RSS in the form of a desktop application or web-based so users can collect and to customize a variety of news from various websites in one location / page.
