CHAPTER V

CONCLUSIONS AND SUGGESTIONS

In this chapter, the focus is on the result of this research regarding to the analysis and findings in the previous chapter. Besides, the suggestions related to the topic of the research is also included in this chapter

5.1 Conclusion

After analyzing the data in the previous chapter, the writer found that the violation of maxim of quantity happens since there are the contexts of situation that influence the violation happen. The contexts are physic, epistemic, linguistics and social. All of them complete one and each other since in every situation the contexts are found. However, in every data, they are the dominant context which becomes the factor thay makes the speaker violates the maxim. The Context of physic can be a dominant factor when the object they are talking and the place takes place influence the speaker violates the maxim. Context of epistemic can be the dominant factor when the background knowledge shared by the speaker and hearer influences the violation occurs. The context of linguistics can become the dominant factor when the previous utterance influences the violation conducted by the speaker. The context of social can be the dominant factor when the intimate relationship between the speaker and the hearer influence the speaker violates the maxim.

Furthermore, the speaker who violates the maxim of quantity has a certain goal in violating the maxim. He can mean to show his decision, expression and opinion; imply to deliver something indirectly; and suggest to do or ask something to the hearer. In addition, the result of the violation effects to the hearer's response, the speaker can whether understand or not what the speaker utters.

Besides, the writer found that the violation of maxim of quantity usually is conducted by the speaker (the first person), however there is the case when the hearer (the second person) also violates the maxim. For instead, when the speaker gives the statement that violates the maxim, the hearer responds the speaker's statement by violating the maxim

5.2 Suggestion

For the next students who are interested in analyzing cooperative principle, the data have to be classified in appropriate way, since there is possible to occur more than one maxim in the same data. To complete the research, the next researcher may analyze the topic about multiple violation of maxim in the conversational implicature.
