ABSTRACT

Lusiana Simbolon 44,307,013. Influence of Regulation North America Free Trade Area (NAFTA) Toward Mexico's Exports of Agricultural Products (2004-2009), International Relations Studies Program, Faculty of Social and Political Sciences, University Computer Indonesia, Bandung, July 2011.

Based on the background of the condition of export of agricultural products in Mexico in 2004-2009 there is a difference from before the inception of the overall elimination of trade barriers and after the holding of the overall elimination of tariff barriers since the merger of Mexico into NAFTA. NAFTA has an important influence in international trade between the three NAFTA member countries, particularly Mexico which increase agricultural exports of Mexico.

Based on a problem that occurs is a new state of the Mexican economy out of the peso crisis, the Mexican government needs to revive the economy in Mexico to join in the NAFTA and cooperation amongst member countries of NAFTA. Where implementation of NAFTA in its goal to achieve economic integration through regulations issued by the NAFTA agriculture.

Based on the descriptive research method that is describing, analyzing, and managing research data, to examine more deeply about the effect of regulation on agriculture issued by the NAFTA who want to achieve a free trade area in North America. Based on the theory of International Organizations, the researchers of this interesting hypothesis, namely " Regulation North America Free Trade Area (NAFTA) Chapter 7 of the agricultural give a positive impact on Mexican exports of agricultural products is characterized by increasing demand for agricultural products by member states of NAFTA (Canada and USA) in 2004-2009". Thus NAFTA has helped increase exports of agricultural products in Mexico.
