ABSTRACT

Early childhood school HIMMATUL 'ALIYYAH is a school that moves in the world of education, who are ready to compete in education. HIMMATUL early childhood school 'section in particular ALIYYAH student registration still using hand written process, making it less effective and efficient in conducting its activities. Some of them are too long registration process, the length of searching student data, always goes wrong in the process of payment of student enrollment, student tuition payments SPP and the length of making the required reports.

With such constraints the author intends to create a computerized information system to enroll students in conducting activities can be effectively and efficiently. Information system development used is prototype. Design processes, databases, and programming using Java software and NetBeans IDE 6.8.1 using MySQL database. Method approach of system used is Object Oriented Depoyment.

It is expected that the system is built to address these issues and can facilitate the process of student enrollment which among others include the input data student, payment of student registration, student data reports, payment reports student enrollment, and payment SPP reports student.

Keywords: System Information, Registration, Student, Payment
