ABSTRACT

Kelurahan Setiamanah is administrative area at Cimahi, exactly from Kecamatan Cimahi Tengah. Which includes several importants parts of the administration, personnel, finance, secretarial, general, planning and reporting. Because much of the district available makes it difficult enough in the process of employee attendance are being used.

This system development used a waterfall method with approach of system analysis and structured programming approach as a tool in the process, while appliance database application development using Visual Basic 6.0 programming language and Microsoft SQL Server 2000 as a database.

From the results of the development of this system, employee attendance data and preparing reports to be more faster and can reduce errors in data recording process.
