ABSTRACT

INFORMATION SYSTEM DESIGN IN THE PART OF PROCUREMENT OF GOODS LOGISTICS PT.INTI (Persero) BANDUNG

PT.Inti (Persero) is a State limited liability company specifically responsible for activities to meet the needs in the field of telecommunications and electronics, both software and hardware. In its business process often delays the inventory information to customers, because existing data warehouse inventories are not corrected directly.

In order to simplify the process of providing information and data management information system is needed that can improve the effectiveness of information system that I created. By designing a system that is made using unified modeling language (UML), Use Case, Sequence Diagrams, Collaboration Diagrams, Class Diagrams and data collection techniques using research method by observation and interviews. While application programs using Visual Basic 6.0 and using WAMP server connection.

Based on testing result, this system can offer several advantages compared with a system that is currently running that is efficient and effective in processing information and data management inventory management information system inventory data PT.Inti (Persero) Bandung can help simplify in the process of obtaining customer information and inventory data management, and can help ease employees in performing their duties.

Keywords: Information systems and data processing.
