Linux is widely used by the public either by software developers (developers) or regular users. The need for linux operating system that is easy to use and has user friendly interface that encourages more people to do remastering Linux.

Remastering generally divided into four sections, namely: downloading source code, installation of operating systems, modifications (remastering) and then create an ISO file from souce code for instalation.

Given the remastering of this distro, I hope more and more users are using Linux to avoid software piracy, because Linux is free.
