Galuh mebel is business entity that focus on furniture sales. Development of this application refer to manual system which runs. The manual system which is used is system of selling that based on how many consumers that come directly. Beside that, Galuh Mebel also have problem, from information about item discount, newest item and how difficult to make a transaction with costumers which is not in Bandung.

Online Sales also commonly known as business online. It means that we sell item online, which also use in galuh Mebel. The features in Galuh mebel are the costumer can make an order, get information about furniture, online transaction through transfer or Paypal, delivery service, while for security system using Secure Socket Layer (SSL) and also IP-Dedicated.

After through the step that suitable with selected development system, the implementation of sales system must be tested. Testing system consist of alpha testing which uses black box test method that focus on software functional requirements and beta testing , that focus on field testing by giving questionnaire to society and interview to admin. After doing alpha and beta testing, it can be concluded that functionally, the system can make expected output and can give information about item discount, newest item and easy to make a transaction
