ABSTRACT

SMA Pasundan 1 Cimahi is a private high school in the flesh by Pasundan institutions located in the middle cimahi jl.terusan No. 32, right in the center in downtown Cimahi. There are some deficiencies in the academic system in SMA Pasundan 1 Cimahi, including the delivery of value to students fairly long, delivery of information and the delivery timetable is still only in the outboard manuals on the noticeboard. Hence there is need for a web-based academic information system in stony interaction between the school with teachers and students. In addition to web development can provide information about SMA Pasundan1 Cimahi to the wider community.

Powered by Prototype system development methods and techniques of interview and observation data collection. it is expected to generate a Web-based learning support system which can be described in object oriented modeling language or UML (Unified Model Language). For information system scoring procces based on web at SMA Pasundan 1 Cimahi a programming language Hypertext Preprocessor (PHP) and MySQL database.

Based on test results expected from information system scoring procces based on web can help the SMA Pasundan 1 Cimahi in terms of value delivery timetable and information from the school to students and can provide information about SMA Pasundan 1 Cimahi to the wider community.
