ABSTRACT

School is central to human resource development which serves to establish the quality of human resources. Like other schools in general, SMP Negeri 1 Paseh also have the same vision and mission. Information systems are built to try to help the school in terms of data processing new admissions information.

Student registration information system design is made using a web-based prototype model of the process. Prototyping method as a new paradigm in the development of management information systems, not just an evolution of information systems development methods that already exist, but at once a revolution in the development of information systems. This method is said to be a revolution because it changed the old information systems development (SDLC).

System built presented online and can be accessed at any time. The system was built to replace the simple school information systems so that data can be well managed schools so that the safety and integrity of data more secure. System built to help the school would be better if the planning and development of aspects of the registration data was upgraded to an academic student.
