ABSTRACT

Information System Service In Salon Punk

Salon Punk is a business engaged in treatment services and the sale of goods COSMETIK. Salon is a salon that pretty much demand. But in this Salon Punk all transactions that occur such as recording of data maintenance, data sale of goods, and inventory records are still handwritten and kept in a book. So the salon is in desperate need of a system to counter the processing transactions and data items, customers, and update the types of care available at the salon punk. So with the authors of this study is expected to create an information service system that will help improve the performance of the cashier.

As for the method - method used to complete this thesis is a method of object-oriented approach to using the system while the system development method used is waterfall model.

While modeling the system using the method of unified Modeling Language (UML) using the Java programming language while Software / Tools the used is NetBeans IDE, 6.71 and MySQL as its database. For Salon Punk is expected to provide alternative and solution for improving performance, both in the processing of customer data, and beauty goods manufacturing earnings per certain period. So with this information system can help increase profits Punk salon in improving their business. And will help make the decisions to be taken to improve its salon business.
