ABSTRACT

Regional Planning Board of West Java Province (BAPPEDA) located on the road No. 287 Bandung Ir.H Djuanda is government-owned company. In Attendance BAPPEDA in handling data still use manual way of the signature and payroll employees who have not yet been fully computerized. A good payroll system is necessary for the company, because if the company does not have a payroll system that will either lead to fraud or irregularities in carrying out their respective responsibilities. So in this case I helped create an application program to facilitate and accelerate its performance by using the NetBeans Java applications.

The methodology used to design a computerized system are: analyzing the running system, designing a new system, making the system / programming, and the latter test system that has been created. Applications generated in the manufacture of this program is the application of information systems and payroll employee attendance at the provincial regional development companies algebra by using the java programming language neatbeans. These applications generate reports employee data, reports Attendance Data Entry, Data Attendance Return report, payroll reports.
