ABSTRACT

PT Jasamarga (Persero) Tbk. Is an agency company engaged in the procurement and operation of toll roads. The company has several sections in its organizational structure. One is the financial part. This section is authorized to manage data better employee loan home loan cash advance, cash advance car, children's education money, and the money home renovation. But in practice, data management - Data loans made financial part still having problems, because the data storage medium in the form of employee loans archives, so as to search the data longer because the archives were piled up, it affects the length of the search process, the manufacture and processing of data employee loans.

This research was conducted with a qualitative descriptive approach, where primary data collection techniques is done by observation and interviews. While secondary data obtained from books and documents contained in the financial section. Jasamarga (Persero) Tbk. The approach taken in this study is a structured approach and method development in this research using a prototype development. While the tools used are Flow Map, context diagram, DFD (Data Flow Diagram). By using the programming language PHP and MySQL database.

From this research found that need created an information system that can overcome the obstacles that occur and are expected with the creation of a new system activities related to loans in the financial section can be done with ease. Good search of employee data, data processing and report generation loans loans will be well integrated.
