ABSTRACT

Korean Moslem Federation is an institution in South Korea which has the highest authority in Islamic activities in Korea. Where KMF has a duty to facilitate all forms of service for Muslims who are in Korea. One of them in terms of information. Submission of information in the form of a brochure about the place of Mosque and halal restaurant not conveyed properly to the visitors who come to Korea. Thus it takes a role which information technology can facilitate the access of information for visitors. One of them is design mobile Applications.

By using Android programming language based on Java, and then built a information application of a moque and halal restaurant in Korea. This application provides features to see information mosques, mosques description, see the information of halal restaurant and description of halal restaurant which integrated with Google Maps.

Based on testing Black Box, an Aplication mobile of Mosque and Halal restaurant can be a solution and a good alternative as a means of delivering information to the visitors Muslims in Korea. And also can facilitate KMF to manage data on mosques and halal food of restaurant stall in Korea.
