The difficulty of finding information on the health club and championship sports an obstacle for all those who are looking for information about the location and data as well as club sports championship events. This is all due to little or no information about the location and data as well as club sports championship. How to do to get this information is to ask other people or go to the KONI office to get the information sought.

With the approach of sports information technology is expected to be delivered to the user and can be used as much as possible. This condition can be satisfied by the existence of a solution is to build an Application Info Sports can provide information about the features provided by the club in the form of maps. Application Info Sports is built to keep track of mobile technology today, the android platform technology. As for communicating with a server, the application using the WebService as a bridge to exchange data with the server

Based on the test results consisting of alpha and beta testing, it can be concluded that the results of the alpha test application is already running quite up, but did not rule out an error can occur when, at the time the application is used, thus requiring the maintenance process to learn more about the shortcomings of the application. While the conclusion of beta testing that the development of mobile applications based on Android Sports Info This is in accordance with the purpose, which makes it easy to find information on sports data, sports clubs, sports championships, and its location and easy access to sports news.

Keywords*: Application Info Sports, Sports Clubs, Sports Championship, Android Platform, Bandung regency, LBS, webservice*
