Kostanbandung.com is an application that is built and developed by college student of Indonesia Computer University (UNIKOM) that is used as an information center of boarding house in Bandung. Kostanbandung.com is built for people who searches boarding house, especially for people who comes from outside Bandung and as a promotion facility for kost owner.

Kostanbandung.com application is built on web-based which aims to facilitate users accessing these applications simply by using a computer connected to the Internet. But sometimes, user is not always in front of a computer or laptop, with the result that, the kostan bandung applications on android mobile-base was built, which aims to make it easier for users when accessing these applications simply by using the android mobile phone connected to the internet. Besides being more convenient, built an application in android mobile-base makes user more flexible (can be accessed anywhere), a small bandwitch, cost more cheaper and new features search location using the map that are connected to the gps to more helped search.

Based on result of blackbox's method, blackbox and betha test, can be concluded that developing application of kostanbandung.com in web-based and android platform serves people's need to promote boarding house's information and facilitate people to search boarding house's information.
