Employment Service Centre (ESC) is a private company which is engaged in promoting vacancies at Universitas Negeri Jakarta (UNJ), it has been main office based in Jakarta. Until recently the company has joined the ESC and the job vacancies were accepted ESC which have very much. These companies are still using the conventional system in doing its work with the archiving system that still use paper media so that the performance is still less efficient. Such a way that would bring its own problems, companies become less competitive because information about the job is still not widely spread.

To solve the above problems, by improving the job of information system available widely and increase the promotion media and reach out to the competition in improving the quality of the company to join with this ESC. ESC wants to use technology in the marketing strategy the company website and provide accurate

For software research methodology using waterfall method, whereas for data modeling uses the structured method Entity Relationship Diagram (ERD) to describe the data model and the Data Flow Diagram (DFD) to depict functional model.

Job Vacancy website online can help prospective employees to obtain information about job vacancies offered by the Employment Service Centre, facilitate the applicants in the process of applying for work, and can help promote the description of work experience that has been obtained.

Key Word : *Job Vacancies, Website, Internet*
