Abstract

Along with the rapid advancement of information technology today, information is very important in running a job and activities. Information is an element that has links the management functions of planning, operation, and control, without any instance/institute information were can not run the operations of an instance well. Information assessment from every student become a reference and measurement to degree of student competence in doing the achievement. The purpose of this study was to find out how the make a schedule procedure, absent ,and assessment from each student in SDN Baros Mandiri 4 Cimahi, helping institutions to enhance effectiveness in assesment data processing to minimize the possibility of error that occurred, and making the application academic system information, The result of this study is expected to be useful and serve as a material consideration in efforts to repair problems associated with the academic system information at SDN Baros Mandiri 4 Cimahi.

The method used in the design of a structured approach based information system. In the application system development phase, the author uses the classical or a waterfall method, a tool used to design systems such as Data Flow Map, Context Diagram, Data Flow Diagrams, Data Dictionary, Normalization, Entity Relationship Diagram, Relationship Table, and the structure of files. Data collect techniques by observation, interview and documentation. While supporting software using MySQL as database and programming language HTML, JavaScript, and php.

The results of research by the author are to produce an academic information system to making a lesson schedule,absent and assesment assist the monitoring , making of assesment report and making a lesson schedule which quickly, precisely and accurately.

Keywords: academic,schedule, assesment
