ABSTRACT

SMA International Islamic Boarding School Of Indonesian Republic is an Islamic educational institutions that implement educational system in the form of academic boarding system that is able to improve the moral quality of students and students with a more organized, coordinated by teachers who are very experienced in the field of Islamic education. IIBS high school was established since 2003, founded by Emil H. Abbas, MBA is located at Jl. Kingdom Industry No.1 Hyundai LIPPO Cikarang Bekasi. As time goes by this IIBS high school until now has seven generation based on data on 20 September 2010 the number of all students and siswinya as many as 110 students / students (50 students and 60 students). With the increasing number of students based on new and to be able to facilitate in coordinating all activities undertaken by students in high school dormitory IIBS requires coaching management in monitoring the formation of personality development of students toward desktop-based Information Systems. The reason for this desktop application development in order to arrange and record all activities performed by high school students IIBS. These activities include rote juz'amma, implementation shaum sunnah, tidiness student rooms, as well as the discipline in terms of going to school, pray and in terms of licensing IIBS out of high school. Development of this application using the Visual Basic programming language, which is one tool that can support the design of this desktop application design, but can give a pretty good view, the use of Visual Basic can help in student database storage and data collection activities performed throughout by the students, supported by SQL Server.
