*This study aims to determine the child's social interaction skills that make activation of the midbrain (brain power activation). The purpose of this study was to determine the social development process with the ability of the midbrain, Action boy with the ability of the midbrain, with the reality of the child at the center of the brain's ability GMOESTY Bandung.*

*This study used a qualitative approach to the informant of seven students. Data were obtained through in-depth interviews, observation, book study, documentation, internet searching, and triangulation. The data analysis techniques used are data reduction, data collection, data presentation, drawing conclusions, and evaluation.*

*The results showed social process or externalizing child with the ability of the midbrain have differences in their interaction. Action or internalization of the child with the ability of the midbrain of a change in behavior and attitude to the reality of the child at the center of the brain's ability GMOESTY Bandung have many positive values.*

*From the research, concluded that the social processes that occur from*

*GMOESTY midbrain activation by making a child has a loving attitude and easy to interact with others. Brain activation by GMOESTY goal is that children have a more stable character and emotions of children is more controlled. As well as the many benefits that can result from activation of the midbrain*

*Suggestion that researchers can give is to have the capability of the midbrain should not serve as an excuse for not performing the duty of formal education as it should, with the convenience offered by midbrain activation. Children do not learn or leave any liability. As a child of the midbrain should still pay attention to it in order to become more successful.*
