First Machinery is a company engaged in the field of woodworking machinery orders and industrial production, such as cutting tools, molds, as well as electronic equipment for industry. In the ongoing process today, First Machinery still require updates in the transaction process and the process of promoting a product.

It can be solved with the construction of e-commerce as a means of transaction processing and update the dissemination of information about the product by using the internet. E-commerce is built web-based, it is intended that customers can conduct transactions wherever booking and whenever they want, with the security of data and applications are secure networking and offline payment options with how to choose a bank that suits. Tests were conducted on this application is the blackbox and beta.

Based on the results of the development of e-commerce is a transaction services company can improve and be more widely promote the product being sold and can streamline the time without having to waste a lot of money.
