Study Programme Visual Communication Design

The purpose of this study is to introduce to the public about the process of making a boat that carried by the craftsmen in Pangandaran Regency. As one of the islands and maritime nation in the world, Indonesia has a very large ocean and diverse. One of the leading Indonesian tourism potential is Pangandaran beach. The existence of a boat ride tour, can not be separated from the boat craftsmen services. These conditions indicate the craftsmen boat have a large impact on the wider community, both for residents and tourists. But the influence of the craftsmen boat is not recognized by the general public.

Boat starts from the production stage which makes printing equipment, making the bone and to the installation of machinery. The craftsmen are divided into teams working on mold cleaners, carpenters and boat hull maker. Craftsmen who worked as a cleaning mold, usually cleaned up the mold, so the outer surface of the boat becomes smooth. Craftsmen who worked as a carpenter makes bones of boat so strong and sturdy. The creation of the hull of the boat, serves as a vacuum so that the boat has a buoyancy. In the final stage, the craftsmen boat together finishing a boat and produce a quality boat.
