Basically berkegiatan mountain climbing is an activity to face the challenges of nature, everything that occurs while doing activities sasuatu nature must be taken by the climbers, though the night to make the climb. But there are still many of the climbers who do not understand about the state of the mountain / forest while at night, because the condition was very different during daytime.

Some conclusions can be drawn from the results of this study, among others, an understanding of the physical preparation, understanding of mountain terrain, as well as mental skills in climbing the night when the distance is getting closer to the top of an active volcano is no more considered by the novice climber compared with the purpose to feel beautiful view The tops of active volcanoes. Still found a couple of nights ascent procedures were overlooked by novice climbers such as topographic maps, understanding predicts internal or external danger during the night climbing and travel tools are still not considered as jackets and shoes.

Design objectives technical information media mountain climbing (climbing night) is to increase the safety of a climbing trip in active volcanoes.

Keywords: Climbing, climbing the night, an active volcano.
