ABSTRACT

INTRODUCTION LETTER FOR APPLICATION HIJAIYAH J2ME BASED EARLY CHILDHOOD IN KINDERGARTEN AL MUHAJIRIN BANDUNG

Hijaiyah letter recognition and mastery that is the basis for reading and studying the scriptures of the Qur'an from an early age is very important, because if at the time of reading the letter hijaiyah already familiar with the words wrong it can lead to different meanings, so we are required to reading is good and right. Method in studying the letter hijaiyah usually provided by traditional tutor (conventional) or people often refer to the method of succession. By teaching these children tend to be passive in receiving lessons mengajinya, as explained tutor children in learning to read letters hijaiyah oral, written and body language.

This final study discusses the design of aid programs to read the letter hijaiyah with the method in the form of visualization in the form of images, text and sound. To implement the method author uses JAVA J2ME programming which serves as a tool (programming system) is used to build an application.

Through the application program is expected to create interest for young children or adults who want to learn how to learn to read letters hijaiyah is good and right can be accommodated.
