ABSTRACT

Introduction of Japan provides information about the state of Japan with a variety of menu option that are required of students in learning about Japanese.

Development of mobile application is currently still limited. Especially in the province of west java in particular areas for potential development of majalengka student learning. Most application are web based and requires the computer to use it.

In this script the goal to be achieved is to design and build applications (mobile application) at a glance the state of japan based introduction to the J2ME J2ME In SMAN 2 Majalengka, that can help students to learn Japanese state information in mobile. This application is divided into ten main menu options include: introduction, history, season, tourist attractions, typical food, geography, major events, exercises, resources, and flash profiles.

The application also comes with multimedia elements such as text, and images. This application use java 2 platform micro edition (J2ME) as the module used to create interfaces and functions.
