ABSTRACT

Apita Futsal is one company that is engaged in the service / booking services futsal.Apita Futsal courts established on 23 July 2009. Currently booking futsal in Cirebon often sought after by people because the number of futsal field that is full and it is difficult to find a field futsal is empty, so often people become lazy to exercise and failed to play futsal in because hard to find the field, then this application so is important and can make it easier for people who want to exercise, especially futsal. Booking manually futsal often takes quite a long time, this is due to several factors that must be considered, namely: Distance subscribers away from the place or futsal who want in the message. Orders are many and at the same time, There are limitations will time and futsal courts. With a system of making members and ordering information futsal court based this website, is expected to manufacture members and booking futsal in Cirebon Apita this will be easier and faster it can serve the needs of the customer field.

Design research is descriptive case study approach in Apita cirebon futsal, as well as data collection techniques used include the primary data source that is by observation and interviews, while the secondary data source that by looking at the documents. The approach used is an object-oriented approach and ordering information systems development methods based website created using prototype method.

Results from this study is expected that the Order Information System Design Based on this Website can help in improving the booking services, can assist in the promotion and introduce futsal field services offered by Apita Futsal Cirebon, and can assist in the marketing disseminate. The final stage is to conduct testing of applications using *Blackbox*.
