This study aims to determine the current system, and to know the process of selling and buying raw materials at Mulia Kreasi. In the system that runs the data processing sales and purchase of raw materials is still done manually. Calculation of prices for goods purchased by consumers are still done using the calculator, it will hamper the sales transaction process. Reporting process is often not appropriate and the absence of an explanation Consumers who already paid or unpaid. The absence of report making purchases of raw materials, so just keep purchase invoices are archived.

The method used is a structured approach to aids in the form of flowmap, contexts diagram, DFD, data dictionary, normalization, table relationships. While the development method used is the development of a prototype.

With the proposed system can help Mulia Kreasi to overcome the existing problems in the current system. Availability of computerized data processing in the form of applications can help the needs of companies in terms of data processing sales and purchases of raw materials as well as information obtained will be faster and fit.

Keywords : *information system, sales, purchase*
