ABSTRACT

Gress Sound System is a company that sells product with a pre-order system, renting product and entertainment service such as wedding party, circumcision party, birthday party, band and many more. This company formed in 1989 until now, from only renting party equipment until produce their own product, this company doesn't have a computerize media, they record all the data by hand writing, this company had one owner, one financial department, two currier and one cashier

The method approach of this research is an object approach and waterfall development, The research design used are descriptive method and action method, Tools to describe the system design consist in use case diagram with scenario, Sequence Diagram, Class Diagram and Deployment diagram. The writer intention is to build Rent And Product selling information sistem using JAVA and MySQL for the database.

The proposed system hopefully can be used to simplify transaction, record product and service rent data in Gress Sound System, so the problem that occurs can be solved. A suggestion for another researcher is to perfect this system, consist in database integration and all system can be integrated with main system in GRESS Sound System

Keywords : Information, System, Rent.
