Evolution is the changes that occur in living organisms gradually and lasts long enough, from past to the present. This study focuses on the evolution of mammals and reptiles. Evolution in mammals consists of elephants and horses, both these mammals are the most abundant animals which leave history traces from the past until today. The evolution of reptiles consists of crocodiles and komodo dragon are both prehistoric animals that are still evolving and that are a living fossil, it means did not change so much from a few million years earlier. The purpose of this study is to give more knowledge about the meaning of evolution through the deformation viewpoint that occurs in the animals. Delivery method is using illustration books, because a lot of evolution books is theoretical and very scientific, so this solution appear to further simplify what has been written from the facts. The book is an appropriate media to convey information about the study of evolution with some visual explanation.

Keywords*: Design, Books, Evolution, Mammals, Reptiles*
